[Hi Bill,](#)
[Thank you for your comment. Mike C. also mentioned that you were reviewing the pore-water sampling plan. Did you have any comments on it?](#)
[Thanks,](#)

Tanya,

I only have one additional comment

Section 3.3.3 Analysis of Pore-Water Samples and Table 1 – The proposed analysis indicated in the section and the Table for the pore-water samples are VOCs and TAL metals plus cyanide. This is not consistent with what was indicated at top of page 12 of the response letter. The response appears to indicate that changes will be made to include that groundwater and pore water will be analyzed for full TCL/TAL metals.

Bill

[Hello All,](#)
[A hardcopy with CD of the Data Gaps SAP and QAPP documents for the Rolling Knolls site should have been received.](#)
[Your comments on the revised SAP and QAPP are requested by November 10 2014, or sooner.](#)

Sorry for the short time line. ARCADIS has asked if EPA can provide a quick response so that they can be in the field by November 17. I informed ARCADIS that EPA will make every effort possible to accommodate their request. However, in the future such requests should be made in a timely manner so that staff can arrange their schedules as appropriate. Thus, your assistance with meeting this request is greatly appreciated.

If you have any concerns with providing comments by the requested date please give me a call upon receipt of this email. In addition, please use the following format for your comments.

Section 3.7.1 Description, paragraphs 3 and 4:

Thanks,
Tanya
